OPERATING MANUAL

PART No. 9381067145
Air Conditioner (Duct type)

CONTENTS

- Sections marked with ***** are dedicated instructions for zone-controlled system.
- Depending on the configuration and the setup of your air-conditioning system, some contents that appear in the screen illustrations in this manual may differ to the actual screen display you are using.

This product uses a bitmap font made and developed by Ricoh Company, Ltd.

1. INTRODUCTION

1-1. Safety precautions

To prevent personal injury, or property damage, read this section carefully before you use this product, and be sure to comply with the following safety precautions.
Incorrect operation due to failure to follow the instructions may cause harm or damage, the seriousness of which is classified as follows:

⚠ WARNING	This mark warns of death or serious injury.
⚠ CAUTION	This mark warns of injury or damage to property.

🚫 This mark denotes an action that is COMPULSORY.

🚫 This mark denotes an action that is PROHIBITED.

⚠ WARNING

🚫
- This product contains no user-serviceable parts. Always consult authorized service personnel for repairing, installation, and relocation of this product. Improper installation or handling will cause leakage, electric shock, or fire.
- In the event of a malfunction such as burning smell, immediately stop operation of the air conditioner, and disconnect all the power supply by turning off the electrical breaker or disconnecting the power plug. Then consult authorized service personnel.
- Take care not to damage the power supply cable. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
- In the event of refrigerant leakage, be sure to keep away from fire or any flammables, and consult authorized service personnel.
- If you see lightning or hear thunder, there might be a lightning strike. To prevent electric shock hazard, turn off the air conditioner by using the remote controller, and do not touch this product or the power source during thunderstorm.

🚫
- Do not start or stop the operation of this product by inserting or pulling out the power plug, or by turning on or off the circuit breaker.
- Do not use inflammable gases near this product. It may cause a fire from leaking gas.
- Do not expose yourself directly to the cooling airflow for many hours.
- Dispose of the packing materials safely. Tear and dispose of the plastic packing bags so that children cannot play with them. There is the danger of suffocation if children play with the original plastic bags.
- Do not insert your fingers or any other objects into outlet port or inlet port.
- Do not operate with wet hands.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

⚠ CAUTION

🚫
- Provide occasional ventilation during use.
- Always operate this product with air filters installed.
- Ensure that any electronic equipment is at least 1 meter away from this product.
- Turn off power source when not using this product for extended periods.
- After long period of use, check whether the installation stand does not deteriorate to prevent this product from falling down.
- When restarting after a long period of disuse in the winter, turn the power source on at least 12 hours before starting the unit.
- The airflow direction and the room temperature should be carefully considered when you use this product in a room with infants, children, elderly or sick persons.
- Keep the surroundings of the outdoor unit clean and tidy, and do not place items around it. Any objects blocking or entering from the outlet ports may cause product malfunction.
- Do not set vessels containing liquid on this unit, or expose it directly to water. Doing so will cause heating, fire or electric shock.
- Do not place electrical devices within 1 m (3.3 ft.) of this unit. It may cause malfunction or failure.
- Do not use fire near this unit or place a heating apparatus nearby. It may cause malfunction.
- Do not touch the switches with sharp objects. Doing so will cause injury, trouble, or electric shock.
- Do not insert objects into the slit parts of this unit. Doing so will cause trouble, heating, or electric shock.

🚫
- Do not direct the airflow at fireplaces or heating apparatus.
- Do not block or cover the inlet port and the outlet port.
- Do not apply any heavy pressure to radiator fins.
- Do not climb on, place objects on, or hang objects from this product.
- Do not place any other electrical products or household belongings under this product. Dripping condensation from this product might get them wet, and may cause damage or malfunction of your property.
- Do not expose this product directly to water.
- Do not use this product for preservation of food, plants, animals, precision equipment, art work, or other objects. This may cause quality deterioration of those items.
- Do not expose animals or plants to the direct airflow.
- Do not drink the drainage from the air conditioner.
- Do not pull the power supply cable.
- Do not touch the aluminium fins of heat exchanger built-in this product to avoid personal injury when you install or maintain the unit.
- Do not stand on unstable steps when operating or cleaning this product. It may overturn and can cause injury.

1-2. Features and functions

INVERTER

At the start of operation, large amount of power is used to bring the room quickly to the desired temperature. Afterwards, the unit automatically switches to a low power setting for economic and comfortable operation.

ECONOMY OPERATION

When Economy operation mode is operated, the room temperature will be little higher than the set-temp under Cooling mode and lower than set-temp under Heating* mode. Therefore, the Economy mode is able to save more energy than other normal mode.

AUTO CHANGEOVER

The operation mode (Cooling, Dry, Heating*) is switched automatically to maintain the set temperature, and the temperature is kept constant at all times.

WEEKLY TIMER

Use this timer function to set operating times for each day of the week. Use the Day off setting to switch off timed operation for a selected day in the coming week. Because all days can be set together, the weekly timer can be used to repeat the timer settings for all of the days.

WIRED REMOTE CONTROLLER

The wired remote controller allows convenient control of indoor unit operation.

WIRELESS REMOTE CONTROLLER (OPTION)

The optional wireless remote controller can be used. When you use the wireless remote controller, there are the following differences as compared with using the wired remote controller.

[Additional functions for wireless remote controller]
 • SLEEP timer
 • TIMER
 • 10 °C HEAT operation

You can use both wireless and wired remote controller simultaneously, however, the functions listed above will be restricted.

ZONE CONTROL

This function enables efficient air-conditioning by selecting specific zones from the various zones divided within the indoor space.
To use this function, installation of the optional "Zone control interface" is necessary. For details, please consult your dealer or authorized service personnel.

1-3. Remote controller overview

⚠ CAUTION

❗ • Press the button lightly with a finger. It may cause a failure if pressed with excessive force.
 • Do not press the screen too hard. It may cause a failure.
(1) **Display panel (with backlight)**
 • Backlights when you press any button.
 • Depending on the operation or setting, the content changes.
 • The brightness, contrast, and automatic light-off setting of the backlight can be adjusted.
 Refer to "5. SUBMENU SETTING".

ⓘ NOTES

• While the backlight is off by the automatic light-off, the first button operation does not work, and the backlight illuminates. (The On/Off button is excluded.)
• While the backlight is set to [Off], it is effective from the first button operation.

(2) **Screen switch button (Left/Right)**
 Backwards the screen to previous setting item or forwards the screen to next setting item.

Ex.) "Date" screen
ⓘ NOTE

• These buttons are active only when any combinations of ⬅ or ➡ and the relevant screen names are displayed in the black field at the bottom of the screen.

(3) **Menu button**
 When you press this button while the "Monitor" screen is displayed, it switches to the "Menu" screen.
 If you press the button again "Menu" screen, it switches to the "Submenu" screen.

(4) **Cancel button**
 Cancels the current selection and returns to previous screen.

 Operable control at the setting is displayed in the lower left of each setting screen as follows:
 • When you press this button while setting, the setting is canceled and returns to the previous screen.

En-3
• When this button is pressed after setting (or before set-ting), it returns to the previous screen.

```
Back: ⊠          Setting: ↵
XXXXXX                    XXXXXX
```
(5) Cursor button

When up/down ▲ ▼ or left/right ◀ ▶ arrows are displayed on the screen, you can move the cursor to change the selected items.
Up/down ▲ ▼ arrows are also displayed when the setting item is adjustable or changeable.

ⓘ NOTE

• Press the marked part on the [Cursor button]. It does not respond correctly when diagonally operating it.

(6) Enter button

Selects the highlighted item or finalize the setting.

ⓘ NOTE

• When switching to another setting screen before the setting is completed, the cancel confirmation screen is displayed. When canceling the setting, select [Yes] with the [Cursor button (Left/Right)] and press the [Enter button].

```
Setting change will be canceled. OK?

      No        ◀      Yes
```
(7) Power indicator
Lights green when the unit is turned on, and goes off when the unit is turned off.

ⓘ NOTE

• It blinks when an error occurs.

(8) On/Off button
Starts or stops the operation.

1-4. About "Monitor" screen

"Monitor" screen shows several statuses such as the operat-ing status of the air conditioner, function setting, or other cur-rent operating conditions.

```
(1)── Monitor              Room 28°C   Mo 10:00
(2)──  [icons]         [icons]
       Mode  ▶  Set temp.      Fan
       ▲
            26°C          ──────(3)
       ▼
       Cool                   High
                Icon check: ↵   ──────(4)
(5)──  ▣ Menu
```
(1) Screen status and current conditions
Shows the current screen name, room temperature, day of the week, and clock.

(2) Icon display
Shows the function that is currently working or set.

ⓘ NOTE

• In this section, all the possible icons are displayed for description.

Icon		Function name	See page
[icon]	-	Economy	10
[icon]	[icon]	Set temp. (temperature) auto return	10
[icon]	[icon]	Set temp. (temperature) range limitation	11
[icon]	[icon]	On timer	12
		Off timer	13
		Auto-off timer	20
[icon]	[icon]	Weekly timer	13
[icon]	-	R.C. (Remote Controller) sensor control	25
[icon]	-	Automatic defrosting, oil recovery, or mode mismatch	32
[icon]	[icon]	Filter cleaning notification	24
[icon]	-	R.C. (Remote Controller) prohibition	-

White icon on a black background:
Indicates that the function is valid and performing the function or standby state.

Black icon on a white background:
Indicates that the controller is in non-operating state be-cause R.C. prohibition on the primary unit is working, or timer has been set, though the function is valid.

About "Icon check" function:
In "Monitor" screen, you can check the name of the icon that indicates function currently set.

ⓘ NOTE

• This function is only available when at least 1 icon is dis-played on the icon display.

• Message balloon with the function name appears when you press the [Enter button] and select the icon by using the [Cursor button (Left/Right)].
• Item that has a timer function, remaining time until the timer expires is also displayed.

```
Monitor                          Mo 10:00
                    ⊕
Off timer: Remaining  1.0 hour

              26°C
   Cool                       High
                 End: ↵
 ▣ Menu
```
- If multiple timers have been set, up/down arrows ▲ ▼ are displayed in the message balloon. To check the target timer function, press the [Cursor button (Up/Down)].

> ⬍ Off timer: Remaining 1.0 hour

- With pressing the [Cursor button (Left/Right)], you can check the other icon functions when several icons are displayed on the "Monitor" screen.
- When you press the [Enter button] again, the message balloon is closed.
- If there is no additional button operation for 3 seconds, the icon check function is finished.

(3) **Operating condition display**
Shows the operating mode, set temperature, and fan speed that are currently working or set.
- Mode display: Operating mode is displayed.
- Set temp. display: Set temperature is displayed.
- Fan display: Fan speed is displayed.

(4) **Operation guidance display**
Shows the current operable items and the button to be pressed.

(5) **Screen switch guidance display**
Any combination of [Menu button] mark (■) with name of switchable screen by pressing the [Menu button] or [Screen switch button (Left/Right)] mark (◀ or ▶) with name of switchable screen by pressing the [Screen switch button (Left/Right)] is displayed.

1-5. About zone control *

"Zone control" enables an efficient air-conditioning by selecting only specific zone from some divided zones in the indoor space.

Application or non-application of air conditioning is controlled by opening or closing of pre-installed damper(s). And an area that is air-conditioned with one damper is defined as one zone.

Up to 8 zones can be set by installing maximum of 8 dampers in one air-conditioning system.

Also, up to 5 room-temperature sensors can be installed in one air-conditioning system. With specifying most suitable sensor among those sensors, it enables more comfortable room-temperature control.

Construction example

Room-temperature sensor

Wired remote controller

Duct-type air conditioner and zone-control interface unit

Damper
If your air-conditioning system is zone-controlled, related setting screens are prepared, and the switchable setting screen name is displayed in the "Monitor" screen as follows:
There are 2 types of zone-control settings; "Zone (single)" controls each individual zone, and "Zone (group)" controls some selected zones all at once.

You can also register desired name for each zone or room-temperature sensor.

For the settings, refer to "5-9. Zone user setting".

● **1-5-1. Zone (single) setting**

Enables application or non-application of the air conditioning for each zone, and selection of the room-temperature sensor.

1 In "Monitor" screen, press [Screen switch button (Right)]. "Zone (single)" screen opens.

Zones and room-temperature sensor currently connected are displayed.
As an setting example, Zone 1 to 8 are supposed to be connected in following instructions.
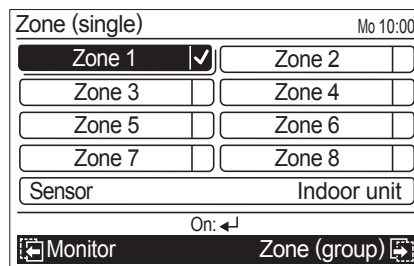

ℹ NOTES

- If any names have been registered for zones and sensors in [Zone user setting], the registered names are displayed on this screen.
- Only connected zones and sensor are displayed.

2 Select zones applying or non-applying the air conditioning as follows:

Select the zone with the [Cursor button], and press the [Enter button].

Zones marked with a check are air-conditioned.
To cancel the air conditioning, set the cursor to the zone marked with a check, and press the [Enter button] to remove the check mark. Unchecked zone is not air-conditioned.

NOTE

- Depending on the initial setup in the installation, there is a case that at least one zone need to be selected.
  In that case, following message is displayed on the screen, and you need to put a check mark at least one zone.

| One zone must be open at all times. |
| ← XXXXXX   XXXXXX → |
3 Select room-temperature sensor as follows:

Set the cursor to [Sensor] with the [Cursor button], and press the [Enter button].

Zone (single)	Mo 10:00
Zone 1 ✓	Zone 2 ✓
Zone 3 ✓	Zone 4 ✓
Zone 5	Zone 6
Zone 7	Zone 8
Sensor	Indoor unit
Setting: ↵	
← Monitor	Zone (group) →
Select desired sensor with pressing the [Cursor button (Up/Down)].
Zone (single)	Mo 10:00
Zone 1 ✓	Zone 2 ✓
Zone 3 ✓	Zone 4 ✓
Zone 5	Zone 6
Zone 7	Zone 8
Sensor	Indoor unit
Cancel: ✗	OK: ↵
← Monitor	Zone (group) →

Each time you press the [Cursor button (Up/Down)], displayed sensor switches as follows.
Non-connected sensor will be skipped.

Indoor unit ←→ Primary RC ←→ Secondary RC
Optional 1 ←→ Optional 2
To complete the setting, press the [Enter button].

● **1-5-2. Zone (group) setting**
Enables the simultaneous setting of zone(s) and room-temperature sensor registered into two groups that you might have different lifestyle; "Day" and "Night".
This setting also allows simultaneous setting to all of the connected zones, as "All".

NOTE

- When "All" is selected, the room temperature sensor specified in "Sensor" of [Zone (single) setting] is applied.

For how to group the zone(s) into "Day" or "Night", refer to "5-9-1. Day/Night setting".

1 In "Monitor" screen, press the [Screen switch button (Right)] twice.
"Zone (group)" screen opens.

Zone (group)	Mo 10:00
Day	Zone: Zone 1
	Zone 2
Night	Zone 3
	Zone 4
All	
	Sensor: Indoor
On: ↵	
← Zone (single)	Monitor →
NOTES

- Zone(s) and room-temperature sensor grouped into "Day" or "Night" in [Zone user setting] are displayed.
- If any names have been registered for zones and sensors in [Zone user setting], the registered names are displayed on this screen.
- Only zones to be air-conditioned are displayed. Undisplayed zones on this screen will not be air-conditioned.

2 Select the group to be air-conditioned with the [Cursor button (Up/Down)], and press the [Enter button].

The group marked a check is air-conditioned.

Zone (group)	Mo 10:00
Day ✓	Zone: Zone 1
	Zone 2
Night	Zone 3
	Zone 4
All	
	Sensor: Indoor
← Zone (single)	Monitor →
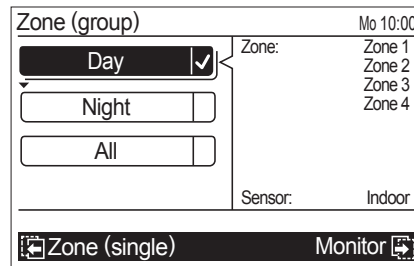

NOTE

- The check mark currently displayed on the screen can be unchecked only if you mark a check to the other group on this screen, or when any setting change is done in "Zone (single)" screen.

2. BASIC OPERATIONS

2-1. Starting the operation

PREPARATION:
Check whether the current time is displayed correctly on the screen. When changing the time or switching the setting for summer time (daylight saving time), follow the instructions in "5-2. Date/Time setting".

Monitor	Mo 10:00
Off	
■ Menu	

En-6
● 2-1-1. On/Off setting

Press the [On/Off button].
The power indicator (green) lights, and the air conditioner starts the operation.
When you press the button again, the operation is stopped, and the power indicator is turned off.
ℹ️ NOTE

- In a zone-controlled air-conditioning system, depending on the type of installed damper, it takes some time until the air conditioner starts the operation after you press the [On/Off button]. In that case, following message is displayed on the "Monitor" screen for about 1 minute, after you press the [On/Off button] to start the operation.

Monitor		Mo 10:00
Mode ◄	Set temp. ►	Fan
❄️ Cool	**26** °C	⌗↻ Auto
Operation will commence in a minute.		
▣ Menu		Zone (single)
The message will go off when the operating preparation of the system is done.

● 2-1-2. Operation mode setting

In "Monitor" screen, select [Mode], and switch to the desired operation mode with the [Cursor button (Up/Down)].

Monitor		Mo 10:00
Mode ►	Set temp.	Fan
↻ Auto	**26** °C	High
▣ Menu		
Operation mode marks

↻	❄️	⬇️	⌗	⚙️
Auto	**Cool**	**Dry**	**Fan**	**Heat**

ℹ️ NOTE

- Only the adjustable operation mode is displayed.

If there is another operation setting to be changed, you can continue the configuration. Move to desired item by using [Cursor button (Left/Right)].

● 2-1-3. Set temperature adjustment

In "Monitor" screen, select [Set temp.] with the [Cursor button (Left/Right)], and adjust the room temperature with the [Cursor button (Up/Down)].
Monitor		Mo 10:00
Mode ◄	Set temp. ►	Fan
↻ Auto	**26** °C	High
▣ Menu		

ℹ️ NOTES

- Possible temperature setting ranges in the operation mode are as follows:

   Cool, Dry, Auto .... 18 to 30 °C (64 to 88 °F)

   Heat................................. 16 to 30 °C (60 to 88 °F)

- When operation mode is set to [Fan], the set temperature cannot be adjusted. ([Set temp.] cannot be selected.)
- If the temperature is being out of the range configured in [Set temp. range] setting, message indicating that the temperature is restricted is displayed on the screen.

Restricted by the set temperature range restriction
▣ Menu
● 2-1-4. Fan speed setting

In "Monitor" screen, select [Fan] with the [Cursor button (Left/Right)], and adjust the fan speed with the [Cursor button (Up/Down)].

Monitor		Mo 10:00
Mode	Set temp. ◄	Fan
❄️ Cool	**26** °C	⌗ High
▣ Menu		

Fan speed marks

⌗↻	⌗	⌗	⌗	⌗
Auto	**High**	**Medium**	**Low**	**Quiet**
ℹ️ NOTE

- When the operation mode is set to [Dry], Fan speed switches to [Auto]. (Fan speed cannot be selected.)

About fan speed [Auto]

When the fan speed is set to [Auto], behavior of the indoor unit fan in non-zone-controlled system and the one in zone-controlled system is different as follows.

In non-zone-controlled system:
   If the room temperature approaches to the configured temperature in [Set temp.], the fan rotates with reduced speed.

In zone-controlled system:
   The fan speed is adjusted depending on the number of air-conditioned zone(s).
   If the volume of provided airflow by [Auto] is not agreeable to your preference, adjust it to just the right fan speed by changing the fan speed.

En-7
Following items can be adjusted in Menu.

ⓘ NOTES

• Functions marked "–" in "Secondary unit" column of following table cannot be adjusted from the remote controller that is specified as the secondary control unit. Adjust the function on the primary unit.
• Depending on the type of the indoor unit, some functions cannot be set.

Settings and Display Items		Details	Operation (See page)	Secondary unit
Function	Economy	The room temperature will be little higher than the set-temp under cooling mode and lower than set-temp under heating mode. Therefore, the economy mode is able to save more energy than other normal mode.	10	O
	Set temp. (temperature) auto return	The temperature automatically returns to the preset value after a certain period of time has elapsed since the set temperature was changed. The set time can be set from 30 to 120 minutes in units of 10 minutes.	10	–
	Set temp. (temperature) range limitation	Limits the range of the set temperature. The temperature range can be limited through the operation mode.	11	–
Timer	On timer	Use this timer function to start air conditioner operation. The timer operates and air condition operation starts after the set time has passed. The timer can be set up to 24 hours in advance. Can be set up to 24 hours in units of 30 minutes.	12	–
	Off timer	Use this timer function to stop air conditioner operation. The timer operates and air conditioner operation stops after the set time has passed. The timer can be set up to 24 hours in advance. Can be set up to 24 hours in units of 30 minutes.	13	–
	Weekly timer	Operation start and end times can be set to 1 week. Up to 8 patterns of On/Off, operation mode, and temperature setting can be set in 1 day. 2 sets of the weekly timer, [Weekly 1] and [Weekly 2], can be set. For example, you can assign the [Weekly 1] for summer and [Weekly 2] for winter. Then you only need to switch [Weekly 1] and [Weekly 2] by the season.	13	–
	Auto-off timer	Operation end time can be set if the air conditioning operation has been started with the [On/Off button] of this remote controller. The set time can be set from 30 to 240 minutes in units of 10 minutes. You can also specify the valid hour in a day for this timer.	20	–

ⓘ NOTE

• If the function you are selecting is restricted by [Management] function, following message is displayed in the operation guidance display.
Following items can be adjusted in Submenu.

ℹ **NOTES**

• Function marked "–" in "Secondary unit" column of following table cannot be adjusted from the remote controller that is specified as the secondary control unit. Adjust the function on the primary unit.
• Depending on the type of the indoor unit, some functions cannot be set.

Settings and Display Items		Details	Operation (See page)	Second-ary unit
Date and time	Date	Sets and corrects the date.	21	O
	Time	Sets and corrects the time.	22	O
	Summer time Daylight saving time	Sets or cancels daylight saving time.	22	O
	Change display format	The display format for the date and time can be changed.	22	O
Screen		The LCD backlight time, backlight brightness, and LCD contrast can be changed.	23	O
Filter sign*[1]	Filter sign reset	Removes the filter sign.	24	O
	Display	Switches between displaying and non-displaying the filter sign.	24	O
R.C. (Remote Controller) sensor control*[1], *[2]		The room temperature sensor of the indoor unit can be switched to the room temperature sensor that is built into this remote controller. ℹ **NOTE** • This setting can be set on either of one of the primary unit or the secondary unit.	25	O
Room temp. (temperature) display		Switches between displaying and non-displaying the room temperature. The displayed room temperature is the temperature around the remote control.	25	O
Key lock select	Child lock	Restricts all the button operation.	26	O
	Part lock	Restricts the [Menu button] operation.	26	O
Initial	Language*[2]	Switches the display language of the remote control. The following languages can be selected: English, German, French, Spanish, Italian, Greek, Russian, Portuguese, and Turkish.	26	O
	Temp. (Temperature) unit	Switches the set temperature and the room temperature display between Celsius and Fahrenheit.	27	O
	Password setting	Password for "Management" function setting can be set. (Refer to the installation manual.)	-	O
Management		Restricts the operations of some functions by non-authorized person. With the password control, only the administrator can get access to the function setting. (Refer to the installation manual.)	-	O
Zone user setting*[3]	Day/Night setting	Enables the simultaneous setting of zone(s) and room-temperature sensor registered into two groups that you might have different lifestyle; "Day" and "Night".	27	–
	Name setting	Enables registration of desired name for each zone, group, and room-temperature sensor.	28	O

*[1]: Functions set to inactive at the factory, and they are not displayed on the "Submenu" screen. To activate these functions, consult authorized service personnel.
*[2]: Dedicated functions for non-zone-controlled system.
*[3]: Dedicated function for zone-controlled system.

3. FUNCTION SETTING

1 In "Menu" screen, select [Function] with the [Cursor button (Up/Down)], and press the [Enter button].

4 For [Return time and temp. setting], select operation mode with the [Cursor button (Up/Down)], and press the [Enter button]. Adjust the value with the [Cursor button (Up/Down)].

With the [Cursor button (Left/Right)], the cursor can be switched [Time] and [Temp].

Set temp. auto return		Mo 10:00
Enable/Disable setting		Enable
Return time and temp. setting		
	Time /	Temp.
Cool/Dry	30min. /	26°C
Heat	30min. /	26°C
Cancel: ⊠	OK: ↵	
← Air flow dire...	Set temp. range →	

To complete the setting, press the [Enter button]. To return to the "Function" screen, press the [Cancel button].

ⓘ NOTES

• The set time can be set from 30 to 120 minutes in units of 10 minutes.
• Possible temperature setting ranges in the operation mode are as follows:
  Cool, Dry .... 18 to 30 °C (64 to 88 °F)
  Heat................................. 16 to 30 °C (60 to 88 °F)
• If any ranges have been set in [Set temp. range] setting, adjustable temperature range in this setting follows the restricted range.
• If you set any ranges in the [Set temp. range] setting after setting of [Set temp. auto return], the restricted range set in the [Set temp. range] also overrides [Set temp. auto return] setting.
• Even if the temperature setting change is done on the secondary remote controller, it returns to the set value in [Set temp. auto return] on the primary remote controller.

When you return to the "Monitor" screen, the icon is displayed. To check the function, press the [Enter button] and select the icon with the [Cursor button (Left/Right)].

← Set temp. au...	Air flow dire... →	

NOTES

- Possible temperature setting ranges in the operation mode are as follows:
  Cool, Dry, Auto .... 18 to 30 °C (64 to 88 °F)
  Heat................................. 16 to 30 °C (60 to 88 °F)
- If the temperature out of the Set temp. range limitation is set, it will be reset at the nearest temperature within the range.
- Even if the temperature setting change is done on the secondary remote controller, it returns to temperature within the range set in [Set temp. range] on the primary remote controller.

When you return to the "Monitor" screen, the icon is displayed. To check the function, press the [Enter button] and select the icon with the [Cursor button (Left/Right)].

Time	2	‑‑ : ‑‑	‑‑‑	
	3	‑‑ : ‑‑	‑‑‑	
End	4	‑‑ : ‑‑	‑‑‑	

Cancel: ✖   OK: ↵

Time 5-8

(6) When you selected [On] (On timer), adjust the value to the desired temperature with the [Cursor button (Up/Down)].

Weekly timer setting   Mo 10:00

Weekly 1	Su	Mo		
Day	1	5:00	On Heat	◄20°C
Time	2	‑‑ : ‑‑	‑‑‑	
	3	‑‑ : ‑‑	‑‑‑	
End	4	‑‑ : ‑‑	‑‑‑	

Cancel: ✖   OK: ↵

Time 5-8
ⓘ NOTES

- When you set "On timer", you need to set both of the operating mode and the temperature firmly.
  Without these configurations, the timer will not work.
- Possible temperature setting ranges in the operation mode are as follows:

  Cool, Dry, Auto .... 18 to 30 °C (64 to 88 °F)
  Heat................................. 16 to 30 °C (60 to 88 °F)
- If the temperature out of the Set temp. range limitation is set, it will be reset at the nearest temperature within the range. However, the adjusted temperature value in this setting will not be corrected automatically.

  (7) To complete the [Time] setting, press the [Enter button].
  When setting the other days of the week continually, perform procedures in step **4** and **5**.

6. To finalize the setting you have set in step **5**, select [End] with the [Cursor button (Up/Down)] and press the [Enter button].

Weekly timer setting   Mo 10:00

Weekly 1	Su	Mo		
Day	1	5:00	On Heat	20°C
Time	2	10:00	Off	
	3	17:00	On Heat	23°C
End	4	‑‑ : ‑‑	‑‑‑	

Back: ✖   Setting: ↵

Time 5-8

If you press the [Cancel button] before you finalize the setting, following cancel confirmation screen is displayed.

Setting change will be canceled. OK?

No ▶ Yes
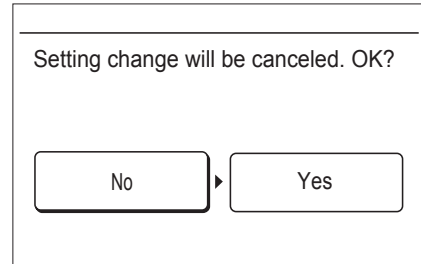

Select [No] or [Yes] with the [Cursor button (Left/Right)], and press the [Enter button].

If you select [Yes] and press the [Enter button] here, all the configured items in step 5 will be canceled.

If you select [No] and press the [Enter button] here, the "Weekly timer setting" screen is displayed. To finalize the setting, select [End] with the [Cursor button (Up/Down)] and press the [Enter button].

ⓘ NOTE

- When the "Weekly timer setting" screen is displayed again after finalizing the setting, the set patterns you have registered will be sorted in time order. (Sorting function)

When you return to the "Monitor" screen, the icon is displayed. To check the function, press the [Enter button] and select the icon with the [Cursor button (Left/Right)].

```

After you select all the applicable zones, press the [Enter button] to complete the individual setting of zone control.

ⓘ NOTES

- When you set "On timer", you need to set all of operating mode, temperature, room-temperature sensor, and applicable zone(s).
  Without these configurations, the timer will not work.
- Depending on the initial setup in the installation, there is a case that at least one zone need to be selected. In that case, following message is displayed on the screen, and you need to put a check mark at least one zone.

```
┌─────────────────────────────────────────┐
│ One zone must be open at all times.      │
│  ◄ XXXXXX              XXXXXX ►          │
└─────────────────────────────────────────┘
```

Simultaneous setting of zone control:
Select [Zone (group)] with the [Cursor button (Up/Down)]. Then press the [Cursor button (Right)] to move the cursor to next setting item.

ℹ NOTE

• Displayed room temperature is the approximate temperature detected around this remote controller, and it could be different from the actual room temperature. It also be influenced by the installation environment of the remote controller.

5-7. Key lock select setting

A locking function is provided to prevent careless operation by children or outsiders. Release the lock on the "Monitor" screen when operating.

To lock up:
When the [Cancel button] is pressed for about 3 seconds or more continuously on the "Monitor" screen.

To release the lock:
When the [Cancel button] is pressed for about 3 seconds or more continuously on the "Monitor" screen, the lock is released, and each applicable lock name on the screen turns off.
Following key lock functions are available:
- •**Child lock**: Restricts all the button operation
- •**Part lock**: Restricts the [Menu button] operation

When [Child lock] is set

```
Monitor                           Mo 10:00

    Mode      Set  temp.      Fan

              26 °C
    Auto                       High

Child lock
```

When [Part lock] is set

```
Monitor                           Mo 10:00

    Mode    ▶ Set  temp.      Fan

2 Select zone, group, or room-temperature sensor to be named.
You can register desired names for following items.

| **Zone:**	**Group:**	**Sensor:**
• Zone 1	• Day	• Indoor unit
• Zone 2	• Night	• Primary RC
• Zone 3		• Secondary RC
• Zone 4		• Optional 1
• Zone 5		• Optional 2
• Zone 6		
• Zone 7		
• Zone 8		

ⓘ NOTE

• Only connected zones and sensors are displayed.

Selecting zone to be named:

1. In "Zone user setting" screen, select [Zone name setting] with the [Cursor button (Up/Down)]. When you press the [Enter button], "Name setting (group)" screen is displayed.

As a setting example, Zone 1 to 8 are supposed to be connected in following instructions.
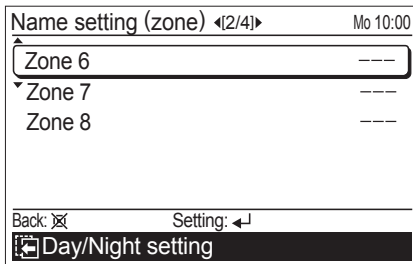

```
Name setting (zone)   [1/4]▶          Mo 10:00
 Zone 1                              ---
▼Zone 2                              ---
 Zone 3                              ---
 Zone 4                              ---
 Zone 5                              ---
Back: ⊠               Setting: ↵
  🔲 Day/Night setting
```

If any names have been registered for the zones already, the registered names are displayed instead of "---" on this screen.

If more than 6 zones are connected, you will have an extra page.
Any of following actions make the screen switches from "Name setting (zone) [1/4]" to the extra setting screen.
 • Pressing the [Cursor button (Right)] in "Name setting (zone) [1/4]" screen.
 • Pressing the [Cursor button (Down)] during the cursor is set to the last zone name in "Name setting (zone) [1/4]" screen.

```
Name setting (zone) ◀[2/4]▶          Mo 10:00
 Zone 6                              ---
▼Zone 7                              ---
 Zone 8                              ---

Back: ⊠               Setting: ↵
  🔲 Day/Night setting
```

2. Select the zone to be named with the [Cursor button (Up/Down)], and press the [Enter button].

Selecting group to be named:

1. In "Name setting (zone)" screen, press the [Cursor button (Right)]. "Name setting (group)" screen opens.

```
Name setting (group) ◀[3/4]▶          Mo 10:00
 Day                                ---
▼Night                              ---

Back: ⊠               Setting: ↵
  🔲 Day/Night setting
```
If any names have been registered for the groups already, the registered names are displayed instead of "---" on this screen.

2. Select the group to be named with the [Cursor button (Up/Down)], and press the [Enter button].

Selecting room-temperature sensor to be named:

1. In "Name setting (group)" screen, press the [Cursor button (Right)]. "Name setting (sensor)" screen opens.

```
Name setting (sensor) ◀[4/4]          Mo 10:00
 Indoor unit                        ---
▼Primary RC                         ---
 Secondary RC                       ---
 Optional 1                         ---
 Optional 2                         ---
Back: ⊠               Setting: ↵
  🔲 Day/Night setting
```
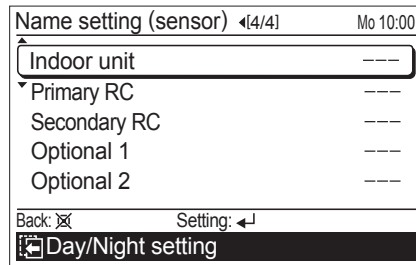

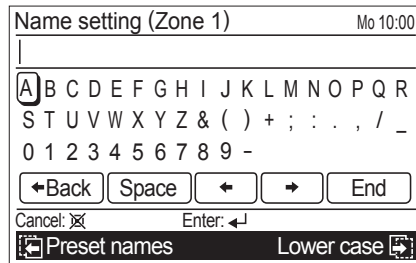

If any names have been registered for the sensors already, the registered names are displayed instead of "---" on this screen.

2. Select the sensor to be named with the [Cursor button (Up/Down)], and press the [Enter button].

When you press the [Enter button] after selecting any of zone, group, or sensor, "Name setting" screen opens.
As the setting example, name setting screen for "Zone 1" is used in following instructions.

```
Name setting (Zone 1)                 Mo 10:00
|
A B C D E F G H I J K L M N O P Q R
S T U V W X Y Z & ( ) + ; : . , / _
0 1 2 3 4 5 6 7 8 9 –
 ←Back   Space     ←      →      End
Cancel: ⊠          Enter: ↵
  🔲 Preset names              Lower case 🔲
```

3 Enter desired name.
For entering the text of the name, there are following 3 screens.

  • Capital
  • Lower case
  • Preset names

You can enter mixed text with "Capital", "Lower case", and "Preset names", up to 12 characters.
When you press the [Screen switch button (Left/Right)] during entering the text, the screen switches as follows.

→Capital ◀——▶ Lower case ◀——▶ Preset names ◀
Capital:
You can select and enter desired capital letter.

In "Capital" screen, set the cursor to the target letter with the [Cursor button], and press the [Enter button].
Selected letter is displayed in the text field.

```
Name setting (Zone 1)                 Mo 10:00
|
A B C D E F G H I J K L M N O P Q R
S T U V W X Y Z & ( ) + ; : . , / _
0 1 2 3 4 5 6 7 8 9 –
 ←Back   Space     ←      →      End
Cancel: ⊠          Enter: ↵
  🔲 Preset names              Lower case 🔲
```

Text field

Lower case:

You can select and enter desired lower case.

In "Lower case" screen, set the cursor to the target letter with the [Cursor button], and press the [Enter button].

Selected letter is displayed in the text field.

```
Name setting (Zone 1)                    Mo 10:00
|
 a b c d e f g h i j k l m n o p q r
 s t u v w x y z & ( ) + ; : . , / _
 0 1 2 3 4 5 6 7 8 9 –
   ◄Back  Space   ←      →      End
 Cancel: ⊠           Enter: ↵
  🔲Capital             Preset names 🔲
```

Text field

Preset names:

You can select and enter desired preset name.

In "Preset names" screen, set the cursor to the target name with the [Cursor button], and press the [Enter button].

Selected name is displayed in the text field.

```
Name setting (Zone 1)                    Mo 10:00
|
    Living        Family        Dining
   Bedroom        Kitchen        Study
   Lounge         Meals         Rumpus
   ◄Back  Space   ←      →      End
 Cancel: ⊠           Enter: ↵
  🔲Lower case             Capital 🔲
```

Text field

ⓘ NOTE

• Maximum text number you can enter is 12 characters including a space. If you try to enter the 13th character, message indicating that the entering text number is exceeding is displayed in the text field as follows: (The 13th character is not displayed.)

```
Name setting (Zone 1)                    Mo 10:00
 Bedroom (Gue|              Over
 a b c d e f g h i j k l m n o p q r
 s t u v w x y z & ( ) + ; : . , / _
 0 1 2 3 4 5 6 7 8 9 –
   ◄Back  Space   ←      →      End
 Cancel: ⊠           Enter: ↵
  🔲Capital             Preset names 🔲
```

4 Set the cursor to [End] with the [Cursor button], and press the [Enter button] to finalize the name registration. Screen returns to the "Name setting" screen, and registered name is displayed.

6. DEMAND RESPONSE AND INDOOR UNIT OPERATION

This product is designed to be compatible with Air Conditioning Demand Response program.

To utilize the function, you need a separate arrangement with your electricity supplier. Please check availability in the place of use.

When your electricity supplier activates one of the following 3 Demand Response (DR) modes, the air conditioner switches over to the appropriate operation. If the optional IR receiver is installed, operation indicators will inform you when the unit has entered the DR mode.

For detailed information on indicator patterns, please refer to the operation manual included in the IR receiver kit.

DR mode	Description of operation in this mode
DR mode 1	Compressor off.
DR mode 2	The air conditioner continues to cool or heat during the Demand Response event, but the electrical energy consumed by the air conditioner in a half hour period is not more than 50% of the total electrical energy that would be consumed if operating at the rated capacity in a half hour period.
DR mode 3	The air conditioner continues to cool or heat during the Demand Response event, but the electrical energy consumed by the air conditioner in a half hour period is not more than 75% of the total electrical energy that would be consumed if operating at the rated capacity in a half hour period.

When the unit enters the DR mode, it performs moderate operation so the cooling or heating effect may be reduced. You cannot override this function by changing the temperature setting using the remote controller or other actions unless the unit finishes the function.

ⓘ NOTE

• Stopping the operation of the air conditioner by using the remote controller or by OFF timer are valid in DR mode. If the timer operation is interfered by an interruption of power supply such as a blackout and the power supply is resumed, no indication of the DR mode is performed. During the DR mode, no indication of "filter sign" is performed.

When the unit finishes the function, it will perform the operation that was previously performed before entering the DR mode.

If you have operational issues, contact your electricity supplier first to check whether they are activating any of the DR mode described above.

If the air conditioner is under demand controlling, consult the issues with your electricity supplier.

If they are not demand controlling the air conditioner, refer to your warranty card for the contact details of Fujitsu General (AUST.) PTY LIMITED or visit our website : www.fujitsugeneral.com.au

7. CLEANING AND CARE

⚠ CAUTION

❗
- Before cleaning the unit, be sure to stop the operation and disconnect the power supply.
- Do not pour water or cleaning solvent on the unit directly, or wash the unit with them.
- Do not expose the unit body to liquid insecticides or hair sprays.
- Keep the surroundings of the outdoor unit clean and tidy, and do not place anything around it. If it is covered with fallen leaves, there could be an infiltration of small animals or insects which in contact with internal electrical components may lead to product malfunction.
- Do not stand on unstable steps when operating or cleaning the air conditioner. It may overturn and can cause injuries.

When used for extended periods, the unit may accumulate dirt inside, reducing its performance. We recommend that the unit be inspected regularly, in addition to your own cleaning and care. For more information, consult authorized service personnel.

ℹ NOTE

- Do not use scouring cleanser, volatile solvents such as benzene or thinner.

8. ERROR CODE

If an error occurs, the power indicator (green) blinks and the following screen will be shown.
If "Error" is displayed, immediately stop the air conditioner operation, and consult authorized service personnel.

Address number of the relevant indoor unit

```
Error                          Mo 10:00
_____

         ⚠   R.C. address : 00
             Code : XXXXXX         Error
                                   code
  ▣ Monitor
```
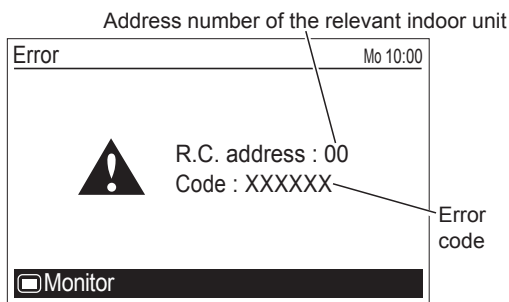

9. TROUBLESHOOTING

Instructions relating to heating (*) are applicable only to Heating and Cooling model (Reverse Cycle).

⚠ WARNING

❗
- In the event of a malfunction (burning smell, etc.), immediately stop operation, turn off the electrical breaker, and consult authorized service personnel.
- Merely turning off the unit's power switch will not completely disconnect the unit from the power source. Always be sure to turn off the electrical breaker to ensure that power is completely off.

9-1. Troubleshooting (general)

Before requesting service, perform the following checks:

● **Normal function**

Does not operate immediately
- If the unit is stopped and then immediately started again, the compressor will not operate for about 3 minutes, in order to prevent fuse blowouts.
- Whenever the electrical breaker is turned off then on again, the protection circuit will operate for about 3 minutes, preventing unit operation during that period.

Noise is heard
- During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner's piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing).
* • During heating operation, a sizzling sound may be heard occasionally. This sound is produced by the automatic defrosting operation.
  <<SEE PAGE 33>>

Smells
- Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner.

Mist or steam are emitted
- During cooling or dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting.
* • During heating operation, the outdoor unit's fan may stop, and steam may be seen rising from the unit. This is due to the automatic defrosting operation.
  <<SEE PAGE 33>>

Airflow is weak or stops
* • When heating operation is started, fan speed is temporarily very low, to allow internal parts to warm up.
* • During heating operation, if the room temperature rises above the thermostat setting, the outdoor unit will stop, and the indoor unit will operate at very low fan speed. If you wish to warm the room further, set the thermostat to a higher setting.
* • During heating operation, the unit will temporarily stop operation (maximum 15 minutes) as the automatic defrosting mode operates. During the automatic defrosting operation, ❄/⏻ will be shown on the remote controller display.
  <<SEE PAGE 33>>
- The fan may operate at very low speed during dry operation or when the unit is monitoring the room's temperature.
- During quiet operation, the fan will operate at very low speed.
- In the monitor auto operation, the fan will operate at very low speed.

Water is produced from the outdoor unit

* • During heating operation, water may be produced from the outdoor unit due to the automatic defrosting operation.

<div align="right"><<SEE PAGE 33>></div>

The filter indicator blinks

• Clean the filter. Afterwards, turn the Filter indicator off.

<div align="right"><<SEE PAGE 24>></div>

🔲 thermo sensor display on the remote controller is flashing

• The room temperature sensor may be malfunctioning. Please consult authorized service personnel.

Airflow is stopped and ❄🔲❓ is displayed on the icon display of the "Monitor" screen

• Airflow is stopped due to the automatic defrosting, oil recovery, or mode mismatch.

Order of timer patterns from [Time 1] to [Time 8] in [Weekly timer setting] is different from what you registered

• If more than 2 timer patterns per a day are registered in [Weekly timer setting] and they are not in proper time order, those patterns are sorted automatically in time order when you finalize the [Weekly timer setting]. (Sorting function)

<div align="right"><<SEE PAGE 13>></div>

Humidity does not drop

In the case of dry operation.
• In some conditions of the room, the humidity does not drop.
• In order to lower the humidity, set a lower room temperature.

● **Check once more**

Does not operate at all

• Has the circuit breaker been turned off?
• Has there been a power failure?
• Has a fuse blown out, or a circuit breaker been tripped?
• Is the timer operating?
• Is key lock enabled?

<div align="right"><<SEE PAGE 26>></div>

Poor cooling (or heating*) performance

• Is the air filter dusty?
• Are the air conditioner's intake grille or outlet port blocked?
• Did you adjust the room temperature settings (thermostat) correctly?
• Is there a window or door open?
• In the case of cooling operation, is a window allowing bright sunlight to enter? (Close the curtains.)
• In the case of cooling operation, are there heating apparatus and computers inside the room, or are there too many people in the room?
• In the unit set for quiet operation?
• Do you have an arrangement with your electric company for demand response?

Following functions cannot be set:
• **Economy**
• **Set temp. auto return**
• **Set temp. range limitation**
• **On timer**
• **Off timer**
• **Weekly timer**
• **Auto-off timer**

• If the function you are selecting is restricted by [Management] function, following message is displayed in the operation guidance display.

```
Back: ▨          Restricted by the management function
◄XXXXXX                    XXXXXX►
```
• Has the function setting been set to [Enable] or [On]?

On timer or Off timer does not work

• Has there been a power outage? Any power outage cancels the On or Off timer.
• After the power supply is resumed, set the [Enable/Disable setting] to [Enable] again.

<div align="right"><<SEE PAGE 12, 13>></div>

Weekly timer does not work

• Have all the necessary settings been completed in [Weekly timer setting]?

<div align="right"><<SEE PAGE 13 to 20>></div>

Operation is automatically stopped

• Has off timer been set?
• Has weekly timer been set?

<div align="right"><<SEE PAGE 13>></div>

• Has auto-off timer been set?

<div align="right"><<SEE PAGE 20>></div>

Operation does not stopped even if auto-off timer has been set

• Has the operation been started by pressing the [On/Off button] on this remote controller?
• Has the operation been started by weekly timer or on timer?
• Has the weekly timer been on during the counting down of the Auto-off timer?
• Has it been within the valid hour?

<div align="right"><<SEE PAGE 20>></div>

• Has there been a power outage? Any power outage cancels the Auto-off timer.

• Is message [R.C. prohibition (All, on/off)] and 🚫 icon displayed?

<div align="right"><<SEE PAGE 4>></div>

Set temperature is changed automatically

• Has set temp. auto return been set?

<div align="right"><<SEE PAGE 10>></div>

Does not return to the set temperature

• Has set temp. auto return been set?

<div align="right"><<SEE PAGE 11>></div>

Set temperature cannot be changed

• Has set temp. range limitation been set?

<div align="right"><<SEE PAGE 11>></div>

• Is message [R.C. prohibition (Set temp. all)] and 🚫 icon displayed?

<div align="right"><<SEE PAGE 4>></div>

If the problem persists after performing these checks, or if you notice burning smells, stop operation immediately, disconnect the power supply, and consult with authorized service personnel.

Before requesting service, perform the following checks:

● **Normal function**

Volume of airflow changes

- Volume of the airflow is affected by configurations in the zone setting.
- If the airflow is too strong, set the fan speed setting lower.
- If the airflow is too weak, set the fan speed setting higher.

<<SEE PAGE 7>>

Airflow does not come out soon after the air conditioner is turned on

- Depending on the type of installed damper, the air conditioner does not start operation for about 1 minute until the spring damper is ready to work.

<<SEE PAGE 7>>

Check mark cannot be removed in [Zone (group) setting]

- Only marking a check is allowed in [Zone (group) setting].
- Mark a check to other group in [Zone (group) setting], or change any setting in [Zone (single) setting].

<<SEE PAGE 6>>

● **Check once more**

No airflow comes out even if the air conditioner is on

- Has a check been marked on the applicable zone properly in [Zone (single) setting] or in [Zone (group) setting]?
- If there is no airflow even if a check is marked on the applicable zone in these settings, there might be a malfunction of the installed damper. Consult your dealer or authorized service personnel.

<<SEE PAGE 6>>

Zone setting screen does not open

- There might be an installation failure.
Consult your dealer or authorized service personnel.

Registered name in [Name setting] on one wired remote controller is not displayed on the other wired remote controller when using 2 wired remote controllers

- Has [Name setting] been done on both wired remote controllers?
- When using 2 wired remote controllers, the name registration in [Name setting] need to be done on both wired remote controllers.

<<SEE PAGE 28>>

Instructions relating to heating (*) are applicable only to Heating and Cooling model (Reverse Cycle).

● **Heating performance***
- This air conditioner operates on the heat-pump principle, absorbing heat from outdoor air and transferring that heat indoors. As a result, the operating performance is reduced as outdoor air temperature drops. If you feel that insufficient heating performance is being produced, we recommend you use this air conditioner in conjunction with another kind of heating appliance.
- Heat-pump air conditioners heat your entire room by recirculating air throughout the room, with the result that some time may be required after first starting the air conditioner until the room is heated.

● **When indoor and outdoor temperature are high***
When both indoor and outdoor temperatures are high during use of the Heating mode, the outdoor unit's fan may stop at times to protect the unit.

● **Fan speed: Auto**
Heating*: The fan will operate at very low speed when the temperature of the air issued from the indoor unit is low.
Cooling: As the room temperature approaches that of the set temperature, the fan speed becomes slower.
Fan: The fan runs at medium fan speed.

● **Microcomputer-controlled automatic defrosting***
- When using the Heating mode under conditions of low outdoor temperature and high humidity, frost may form on the outdoor unit, resulting in reduced operating performance. In order to prevent this kind of reduced performance, this unit is equipped with a microcomputer-controlled automatic defrosting function. During the defrost cycle, the indoor fan will shutdown and ❄/⏻ will be displayed on the remote controller. It will take maximum 15 minutes before the air conditioner starts up again.
- After Heating operation stops, if frost forms on the outdoor unit, the unit will start Automatic defrosting operation. At this time, the outdoor unit will automatically stop after operating for a few minutes.

● **Low ambient cooling**
When the outdoor temperature drops, the outdoor unit's fans may switch to low speed, or one of the fans may stop intermittently.

● **Hot start***
The indoor unit prevents cold drafts when Heating operation begins.
The indoor unit fan will not operate or it will operate at a very low speed until the heat exchanger reaches the set temperature.

● **Dual remote controllers (optional)**
An additional remove controller can be added up to the maximum of two remote controllers. Either remote controller can control the air conditioner. However, the timer functions cannot be used at the slave unit.

● **Group control**
One remote controller can control up to 16 air conditioners. All of the air conditioners will be operated with the same settings.
● **Mode operation**

Auto (in cooling model)

- When Auto (automatic changeover) operation first selected, the fan will operate at very low speed for about a few minutes, during which time the indoor unit detects the room conditions and selects the proper mode.

  Room temperature is higher than the defined temperature in temperature setting → Cooling mode or dry mode

  Room temperature is close to or lower than the defined temperature in temperature setting → Monitor operation

Defined temperature in temperature setting — Cooling mode or Dry mode / Monitor operation

- When the indoor unit has adjusted your room's temperature to near the temperature setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the indoor unit will once again select the appropriate operation (cooling) to adjust the temperature to the value set in the temperature setting.
- If the mode automatically selected by the unit is not what you wish, select one of the mode operation (Cooling, Dry, Fan).

Auto [in heating and cooling (Reverse cycle) model]

- When Auto (automatic changeover) is selected, the air conditioner selects the appropriate operation mode (cooling or heating) according to your room's present temperature.
- When Auto operation first selected, the fan will operate at low speed for about a few minute, during which time the indoor unit detects the room conditions and selects the proper operation mode.

  Room temperature is higher than the defined temperature in temperature setting → Cooling mode or dry mode

  Room temperature is close to the defined temperature in temperature setting → Determined by outdoor temperature

  Room temperature is lower than the defined temperature in temperature setting → Heating mode

Defined temperature in temperature setting — Cooling or Dry / Determined by outdoor temperature / Heating
- When the air conditioner has adjusted your room's temperature to near the thermostat setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the air conditioner will once again select the appropriate operation (heating, cooling) to adjust the temperature to the value set in the thermostat.
- If the mode automatically selected by the unit is not what you wish, select one of the mode operation (Heating, Cooling, Dry, Fan).

Heat*

- Use to warm your room.
- When Heating mode is selected, the air conditioner will operate at very low fan speed for about 3 to 5 minutes, after which it will switch to the selected fan setting. This period of time is provided to allow the indoor unit to warm up before beginning full operation.
- When the room temperature is very low, frost may form on the outdoor unit, and its performance may be reduced. In order to remove such frost, the unit will automatically enter the defrost cycle from time to time. During Automatic defrosting operation, the Heating operation will be interrupted.
- After the start of Heating operation, it takes sometime before the room gets warmer.

Cool

- Use to cool your room.

Dry

- Use for gently cooling while dehumidifying your room.
- You cannot heat the room during Dry mode.
- During Dry mode, the unit will operate at low speed; in order to adjust room humidity, the indoor unit's fan may stop from time to time. Also, the fan may operate at very low speed when adjusting room humidity.
- The fan speed cannot be changed manually when Dry mode has been selected.

Fan

- Use to circulate the air throughout your room.

ℹ **NOTES**

*During Heating mode:
Set the thermostat to a temperature setting that is higher than the current room temperature. The Heating mode will not operate if the thermostat is set lower than the actual room temperature.

During Cooling/Dry mode:
Set the thermostat to a temperature setting that is lower than the current room temperature. The Cooling and Dry modes will not operate if the thermostat is set higher than the actual room temperature (in Cooling mode, the fan alone will operate).

During Fan mode:
You cannot use the unit to heat or cool your room.

● **Automatic restart**
In Event of Power Interruption

- Should the power supply to the air conditioner be interrupted by a power failure, the air conditioner will restart automatically in the previously selected mode once the power is restored.
- Use of other electrical appliances (electric shaver, etc.) or nearby use of a wireless radio transmitter may cause the air conditioner to malfunction. In this event, temporarily disconnect the power supply, reconnect it, and then use the remote controller to resume operation.

● Notices

* • During use of the Heating mode, the outdoor unit will occasionally commence the defrost operation for brief periods. During the defrosting operation, if the user sets the indoor unit for heating again, the defrosting mode will continue, and the Heating operation will begin after completion of defrosting, with the result that some time may be required before warm air is emitted.

* • During use of the Heating mode, the top of the indoor unit may become warm, but this is due to the fact that coolant is circulated through the indoor unit even when it is stopped; it is not a malfunction.

9-4. Temperature and humidity range

Permissible ranges of temperature and humidity are as follows;

• Cooling / Dry operation

Outdoor temperature	About –5°C to 46°C
Indoor temperature	About 18°C to 32°C
Indoor humidity	Below approximately 80%. If the air conditioner is used continuously for many hours, water may condense on the surface and drip.

• Heating operation

Outdoor temperature	About –15°C to 24°C
Indoor temperature	About 10°C to 30°C

If the unit is used under higher temperature conditions than those noted here, the automatic protection circuit may operate, interrupting the operation.

If the unit is used under lower temperature conditions than those noted here, the heat exchanger may freeze, causing water leakage or other malfunction.

• If the air conditioner is used outside of the specified temperature range, it may shorten the product life.

• Do not use the air conditioner for any purpose other than room cooling/dry, room heating, or fan.
